

Instructions for use and warning notice for dining tables.

Applies to our entire collection.

Generally:

- Use the dining table only for its intended purpose.
- The supplied assembly instructions as well as the quality pass with important care instructions as well as further information on material properties and product properties must be observed. Keep them even after installation so that maintenance and repair work can be carried out professionally.
- For further information, the QR code on the dining table can be scanned.
- The dining table must be placed onto a steady and even floor.
- The maximum distributed load of 150 kg must not be exceeded.
- High lateral loads on the dining table top must be avoided in order to counteract the risk of the dining table tipping over.
- Do not leave any vessels such as glasses or vases that are damp from below on the dining table, as these leave rings on the surface. Wipe off the moisture immediately so that it cannot penetrate and cause stains.
- Do not put hot pots without a trivet onto the dining table.

For dining tables with function (folding insert), the following also applies:

- The dining table may only be used with the brakes closed, to avoid unintentional opening of the pull-out mechanism.
- All items must be removed from the table before the table extension is operated, otherwise they may fall down.
- The use of the table extension must be done according to the assembly instructions. Be careful not to reach between the moving parts.
